

GEA Bock 6 and 8 Cylinder Compressors HG76e and HG88e

Semi-hermetic Piston Compressors for large Refrigerating Capacities

GEA Bock compressors HG76e and HG88e

The GEA Bock mexxFlow® valve plate system – the flow-optimized combination of double ring fin valve plate and mexxFlow® cylinder head ensures a maximum of efficiency.

Based on our current semi-hermetic product range, with its outstanding advantages and features, GEA Bock now presents you a new generation of the largest semi-hermetic compressors. The new GEA Bock compressor models HG76e and HG88e offer maximum efficiency and easy handling for chillers and performance-intensive refrigeration applications. The revised versions of the GEA Bock 6-cylinder and 8-cylinder compressors, have already established ten years ago, achieve new records in terms of efficiency due to the use of the GEA Bock mexxFlow® valve plate system.

Special features

GEA Bock achieves an advance in efficiency of the models HG76e and HG88e in comparison to its predecessors due to the use of the mexxFlow® valve system. With the mexxFlow® system pressure losses can be minimized thanks to a flow-optimized double ring fin construction of the valve plate in combination with a cylinder head, which is specially adapted to the valve plate. Thus, the efficiency of the compressors can be increased considerably.

mexxFlow®
the benchmark for efficiency.

INT69 G Motor Protection

Electronic Motor Protection GEA Bock INT69 G

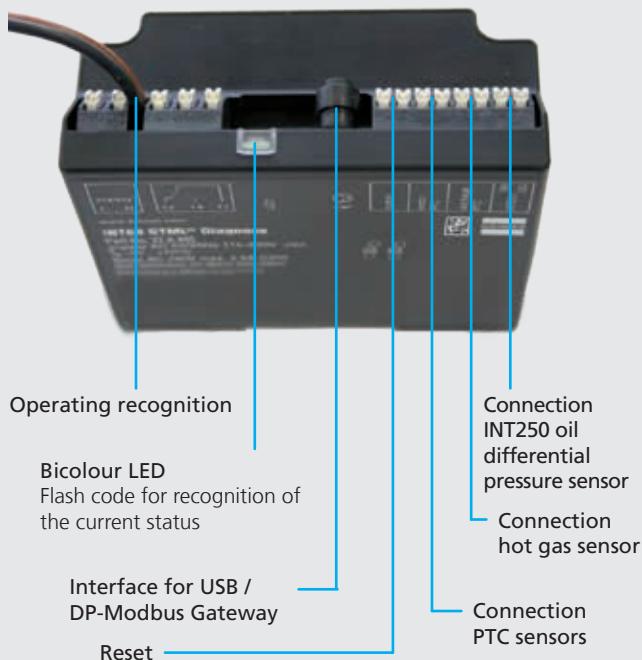

Temperature safety drive for the drive motor

The INT69 G is replacing in all future new developments the MP10 compressors used as standard at GEA Bock

The INT69 G also provides the usual functions, as:

- motor temperature monitoring
- hot gas temperature monitoring
- a reconnection preventing device
- a reset

INT69 GTML Diagnosis

Technical data

Unit designation	INT69 G	INT69 GTML Diagnosis
Connection voltage	AC 115-230 V - 1 - 50/60 Hz ± 10% 3 VA	AC 115-230 V - 1 - 50/60 Hz ± 10% 3 VA
Relay	AC 240 V, 2,5A, C300	AC 240 V, 2,5A, C300
Dimensions L/W/H	53 x 33 x 68 mm	87 x 40 x 81,5 mm

INT69 G Diagnose Unit Motor Protection

Read facility via INTelligence diagnosis software

With the INTelligence software, valuable information can be obtained on the status of the compressor and the system. The diagnosis function includes the plausibility checks of the logic sequences, all important operation and error values of the compressor and provides for its clear visualization.

Crucial evaluation parameters can be configured individually. This allows for a quick analysis and an efficient system management.

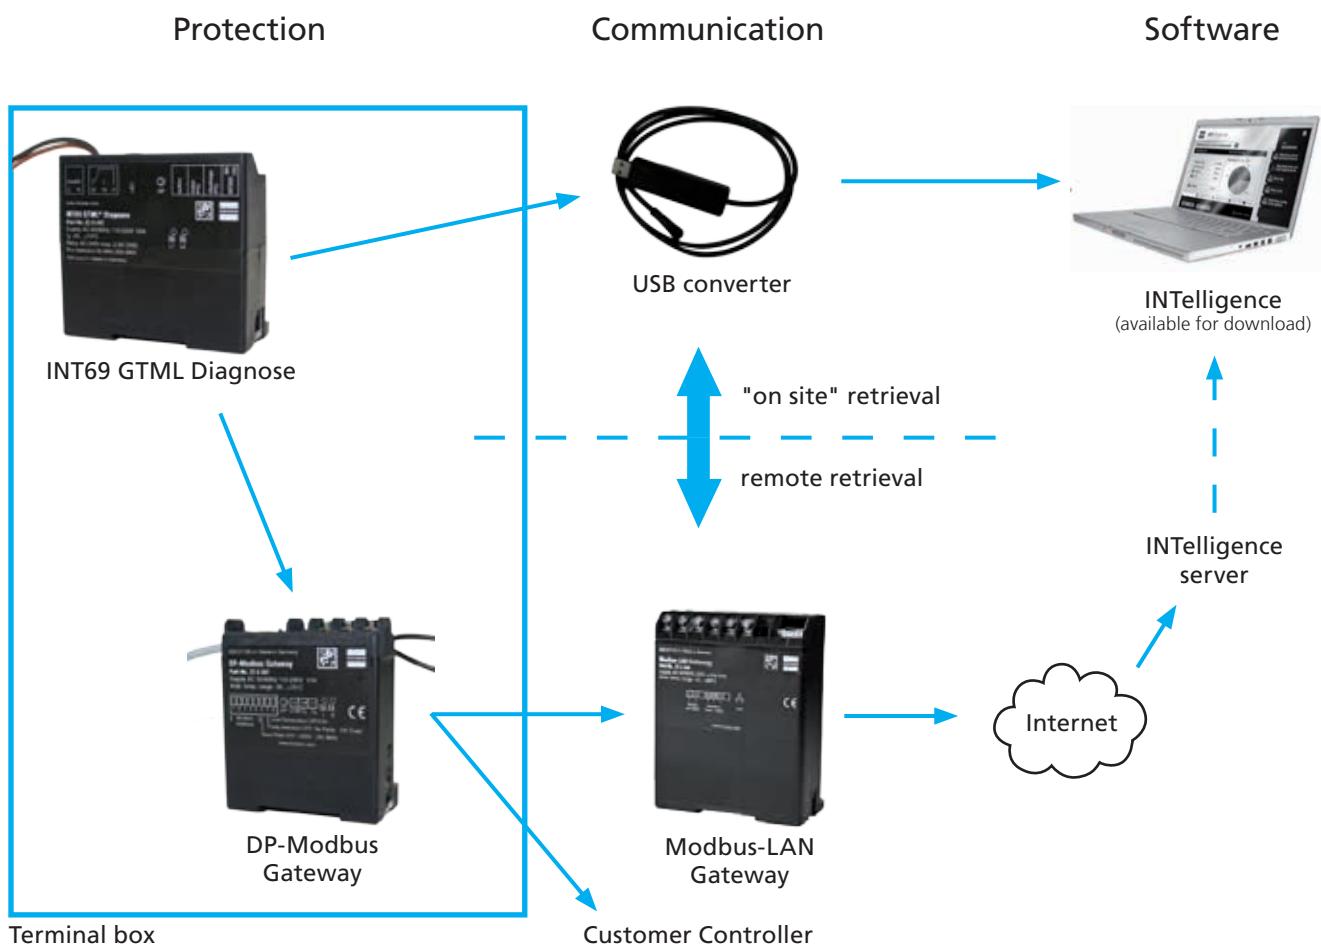

Advantages:

- Simple operation
- Immediate diagnosis and precise problem solving
- Specially adaptable to the user's needs

If required, data can be retrieved directly at each compressor via USB port. A Modbus interface is available for integration in a network.

The data are sent periodically via the DP-Modbus gateway and the Modbus-LAN gateway to a server and can be retrieved remotely by the INTelligence diagnosis software.

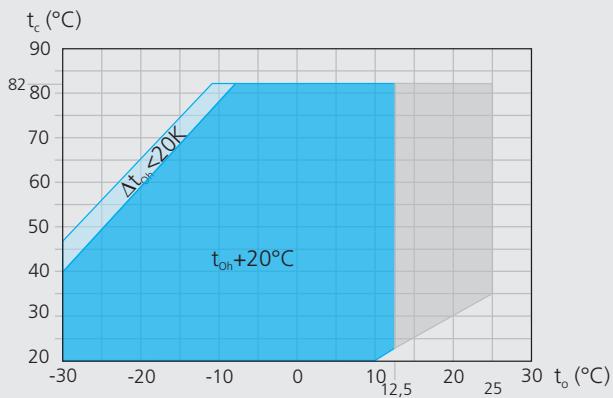

The INTelligence diagnosis software can be downloaded for free at www.kriwan.com.

Further explanation can be found at www.kriwan.com.

In the event of inquiries please contact our Department for Application Technology, phone +49 7022 9454-0.

R134a Notes

Operating limits

Compressor operation is possible within the limits shown on the application diagrams. Please note the coloured areas. Compressor application limits should not be chosen for design purposes or continuous operation.

Restrictions to the operating limits may occur when using a frequency converter.

Performance data

The performance data for R134a are based on EN 12900 with a **50 Hz power supply frequency**.

This signifies: **20 °C suction gas temperature without liquid sub-cooling**.

Conversion factor for 60 Hz = 1,2

Performance data for other operating points, see GEA Bock software.

Relating to 20 °C suction gas temp.
without liquid subcooling

Motor version -S- (more powerful motor)

Supplementary cooling or reduced suction gas temp.

R22 Operating limits

Unlimited application range

Supplementary cooling or reduced suction gas temperature

Supplementary cooling and reduced suction gas temperature

Motor version -S- (more powerful motor)

t_o Evaporation temperature (°C)

t_c Condensing temperature (°C)

Δt_{oh} Suction gas superheat (K)

t_{oh} Suction gas temperature (°C)

Max. permissible operating pressure (LP/HP)¹⁾: 19/28 bar

¹⁾ LP = low pressure HP = high pressure

R22 Notes

Operating limits

Compressor operation is possible within the limits shown on the application diagrams. Please note the coloured areas. Compressor application limits should not be chosen for design purposes or continuous operation.

Restrictions to the operating limits may occur when using a frequency converter.

Performance data

The performance data for R22 are based on EN 12900 with a **50 Hz power supply frequency**.

This signifies: **20 °C suction gas temperature without liquid subcooling**.

Conversion factor for 60 Hz = 1,2

Performance data for other operating points, see GEA Bock software.

* PW = Part Winding, motors for part winding start

1 = 1. part winding 2 = 2. part winding

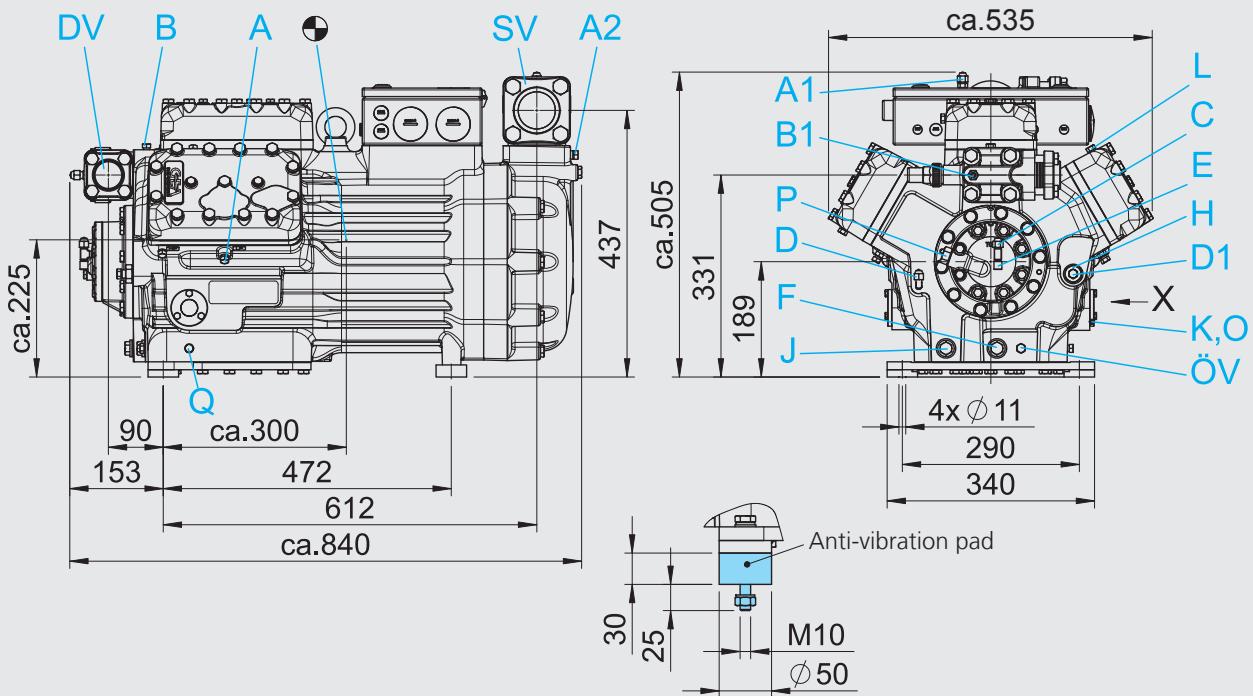

Explanations:

- ① Tolerance ($\pm 10\%$) relates to the mean value of the voltage range.
Other voltages and current types on request.
- ② - The specifications for max. power consumption apply for 50Hz operation. For 60Hz operation, the specifications have to be multiplied by the factor 1.2. The max. working current remains unchanged.
- Take account of the max. operating current / max. power consumption when designing contactors, leads and fuses.
Switches: Service category AC3

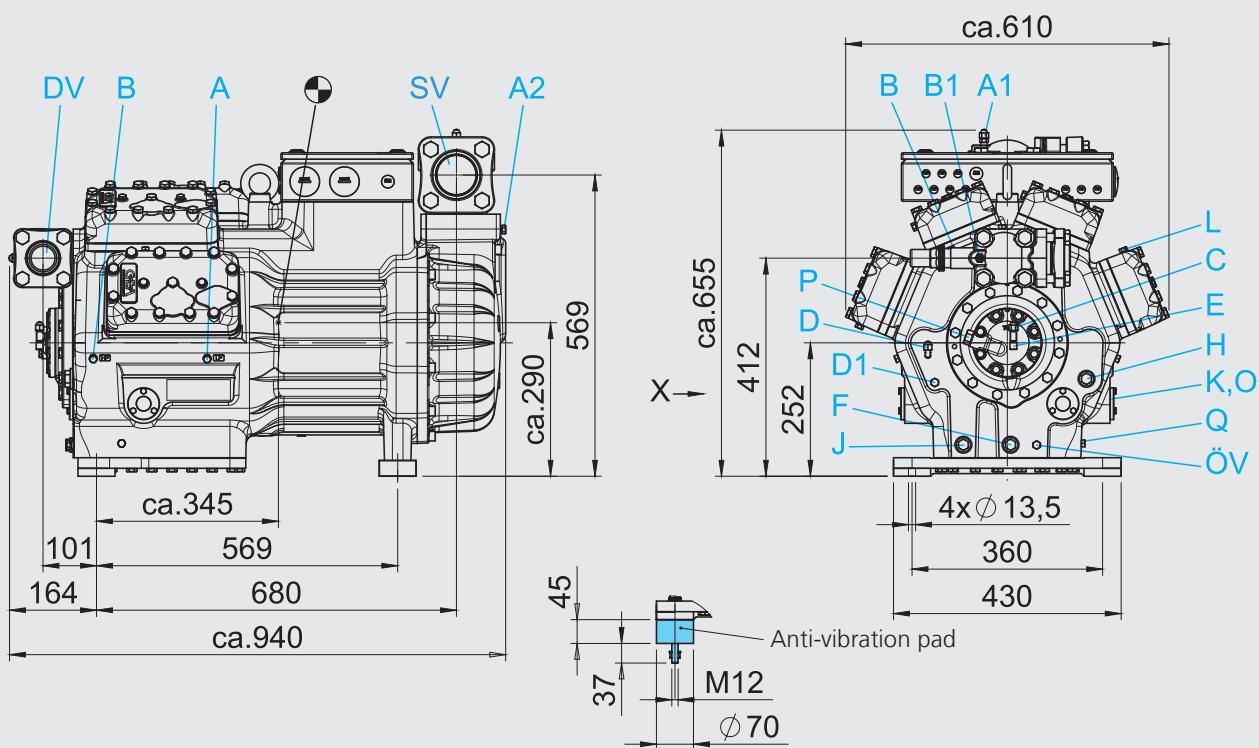

- ③ 380-420 V Y/YY - 3 - 50 Hz PW
440-480 V Y/YY - 3 - 60 Hz PW
PW = Part Winding, motors for part winding start
(no start unloaders required)
- Winding ratios: 50% / 50%
- Designs for Y/Δ on request

- ④ For soldering connections
