AKM system software for Windows 7 32 bit

With the NEW AKM you can receive alarms via e-mail or SMS. You experience an extended Front End support with the possibility to change set-point values, generate graphical overviews and plant lists, receive alarms, collect log on the AK-SC 255/CS. The SCAN function ensures stable connection to all types of Front Ends at all times and the enhanced menu is aligned with the Danfoss Front Ends AKA 245, AK-SC 255/AK-CS giving a better user-interface.

Features

AKM is a key element in the operation and servicing of ADAP-KOOL® refrigeration controllers. The program has been continually developed in consultation with service companies, and today it features the most frequently demanded functions for the servicing, operation, alarm management, etc. for ADAP-KOOL® refrigeration system controllers. In line with the developments the system software has been updated as to language and literature. The program is divided into four versions adapted to various customer requirements:

- **AK Monitor**   End-users requiring a simple overview of the store

- **AK Mimic**   End-users also requiring a graphic overview of the refrigeration points of the Store

- **AKM 4**   Service companies needing all the appropriate set-up options to change set-up in Gateways (GW), connect to more than one plant, etc

- **AKM 5**   Service companies also needing a graphic overview and the possibility to add more than one communication channel to Front Ends

Applications

| Front-Ends	AKM – Hasp versions			
Full Package* code number Hasp only code number	**AK Monitor** 084B4500 084B4533	**AK Mimic** 084B4501 084B4534	**AKM 4** 084B4512 084B4531	**AKM 5** 084B4515 084B4532
Gateway (GW)
